

CCS Expertise Network - Baltic Sea region
Opening Workshop
Wednesday 15th October 2014, 08.30 – 13.30
Elforsk, Olof Palmes Gata 31, Stockholm

*Bringing professionals in the Carbon Capture and Storage field together,
to explore opportunities for Baltic Sea Region collaboration*

The Baltic Sea Region Energy Cooperation* (BASREC), has initiated and funded the new expertise network for Carbon Capture and Storage (CCS). The long term objective is to support the deployment of CCS in the region. Read more about both BASREC and the [Network](#).

Please accept this invitation to join the network by registering [here](#) and to participate in the opening workshop by also sending your contact details to [info\(at\)projectum.fi](mailto:info(at)projectum.fi), no later than 30th September. Please also forward this invitation to your colleagues.

The workshop

Based on a catalogue of current CCS activities in the region, the workshop will focus on synergy opportunities through the establishment of this network. The Network's initial focus will be on geological storage and public perception while going forward, it will also address transport infrastructure. The workshop objective is to map interest and actors and to agree on format, governance and way forward.

The workshop will be in English and participation is free of charge.

Should the workshop timing not be optimal for you, do join the network anyway and come for the next event.

Welcome,
Per Arne Nilsson
Coordinator
On behalf of BASREC

Please note: The workshop is organized in conjunction with an open CCS Seminar, taking place in Stockholm Tuesday 14th October, 12.00 – 17.30. [[Bastor2 seminar](#)]

* BASREC – the Baltic Sea Region Energy Cooperation – was founded in 1998 by the ministers for energy of the region and the European Commission. BASREC is under the umbrella of the [Council of the Baltic Sea States](#) and covers the issues of energy and energy-related climate policy in the region. Today, BASREC represents a unique and important regional forum for dialogue on energy policy and global climate change issues with an emphasis on the promotion of energy efficiency, the use of renewable energy and other sustainable supply sources.
